

Dear Middle School Parents and Guardians,

Hello and welcome to the end of the school year.

I have received some inquiries in regard to summer work. After some debating, I have decided to recommend that the students use the summer to play with math in a way that is meaningful to them. I will not be assigning summer homework in mathematics. See below for reading recommendations!

I do, however, recommend some fun websites and apps out there:

Prodigy: play.prodigygame.com

Boddle: boddlelearning.com. There are also apps for both Apple and Google

Sheppard Software: sheppardsoftware.com

Cool Math: Coolmathgames.com. A bit on the easy side, but still fun

Mathigon: mathigon.org. Mathigon has areas for math exploration. Knowing your facts is great, but understanding fractals is something else entirely!

Xtramath: practice math facts or, better yet, flashcards in a box!

Khan Academy: khanacademy.org This website is instructional and offers lessons to help boost knowledge. It has helped my college-age children but covers all levels and various subject matters.

Youcubed.org A different way to look at math.

***If you struggle with getting any of these to work, please contact
